

## ESEE Knives ESEE-3 Sheath System

The ESEE-3 sheath system was designed by ESEE Knife Company and field tested by military personnel during its development phase. This unique system allows the user to carry the ESEE-3 knife securely on a MOLLE platform in standard or inverted mode. The knife can also be carried concealed inside the waist band by removing the molded sheath from the MOLLE back and attaching the included boot clip. The molded sheath is also designed to attach to a standard Blade-Tech Tek-Lock or MOLLE Lok for additional vertical and horizontal carry options.

The ESEE-3 knife is held in place by a friction fit in the molded sheath. The knife is easily removed by gripping the knife handle with the fingers, then pushing the thumb against the sheath. The elastic butt cover and Velcro retention strap add additional security measures for jumping from aircraft or other extreme activities that may cause the knife to come loose from the sheath. The sheath system is fully ambidextrous in any carry mode. It can also be belt carried, drop-leg carried or lashed. The lashing holes also facilitate storing a length of 550 cord by wrapping around the sheath and through the open holes. The attached paracord can be used as a lanyard or threaded through the molded sheath to form a belt loop.

A lot of thought went into this design, thus creating a compact package capable of survival uses, as well as military, law enforcement and rescue duty. The sheath screws are made from stainless steel and no metal snaps are used on the knife retention since they have a tendency to jam with dirt and grime.

*Note: For security purposes always use the MOLLE back and elastic pommel cover when carrying inverted.*

All of our knives are made in the USA with absolute attention to quality materials and care during the manufacturing process. We stand behind our knives with a 100% lifetime, unconditional guarantee. If your ESEE knife should ever fail we will repair or replace it. This warranty follows the knife throughout its life, anywhere in the world.
