

## GIBSON AXE

The ESEE made in the U.S.A. Gibson Axe was designed by James Gibson as a small, compact axe that will easily fit in a backpack. Gibson's stated goal was a comfortable using tool that could do most camp chores, as well as being used as a carving axe. The Viking bearded head allows for close up work and the finger grooves / textured scales along with the swell on the end provides an excellent gripping surface when chopping. The 1095 high carbon steel frame is about as indestructible as you can get for an axe this size.
